

Leading the Industry in Solar Microinverter Technology

Powerful, reliable, safe, with a bankable warranty

The APsystems Advantage

POWERFUL

The sun works all day. Your solar array should too.

With a lower startup voltage than competing brands, APsystems microinverters work longer at both ends of the day. That means more energy generation throughout each solar cycle — putting more power into your home and saving you money, from sunup to sundown. Individual MPP Tracking for every single module maximizes the yield in all situations, even in daytime, with weak light or shade, regardless of the module orientation.

BUILD TO LAST

130 patents for flawless reliability.

You need an integrated system that works well. The APsystems solar solution combines highly efficient power conversion with state-of-theart data collection and monitoring so you'll know precisely how your system is functioning at all times. No matter where you are.

WARRANTIED

10 or 15 years is a long time. We'll be here for you.

APsystems offers microinverter warranties from 10 up to 15 years. When you invest in a solar array, you want to know it's built to last. And with proven bankability, strong backing and a powerful business model, we'll be here to back it up for years to come.

MODULAR

Expand your system according to your needs.

You can start with a balcony system and convert it into a bigger solar installation on your roof without any constraints.

SAFF

First responders or just you, everyone should be safe on the roof.

National safety codes like NEC 2014 mandate safety features for solar rooftop solar components, such as arc-fault protection and rapid system shutdown. APsystems microinverters are designed and built for compliance. And their low-voltage DC operation adds an extra layer of safety to your confidence as a homeowner.

SMART, PLUG & PLAY

Easy to install.

With our Duo or Quad micro, have your kit installed in record time. Our advanced Energy Monitoring & Analysis software offers comprehensive, round-the-clock monitoring of the APsystems microinverter array. Its reliable range of features meets both homeowner and installer requirements.

10 YEARS OF INNOVATION, A GLOBAL REACH.

APsystems was founded in Silicon Valley in 2010, and is now a worldwide leader in advanced solar microinverter technology. In fact, with over 100,000 installations in more than 120 countries, in 2019 APsystems became #1 multi-module microinverter manufacturer worldwide, offering the widest range of microinverters available on the market. No matter where you live, you'll find a registered APsystems distributor or installer ready to set you up.
