3.1 Determine the current firmware version	26
3.2 Apply the Upgrade	27

Purpose

This guide describes the steps to upgrade the firmware for the LineAmp+Ethernet (LAE) using physical connections from the LAE to a PC/laptop.

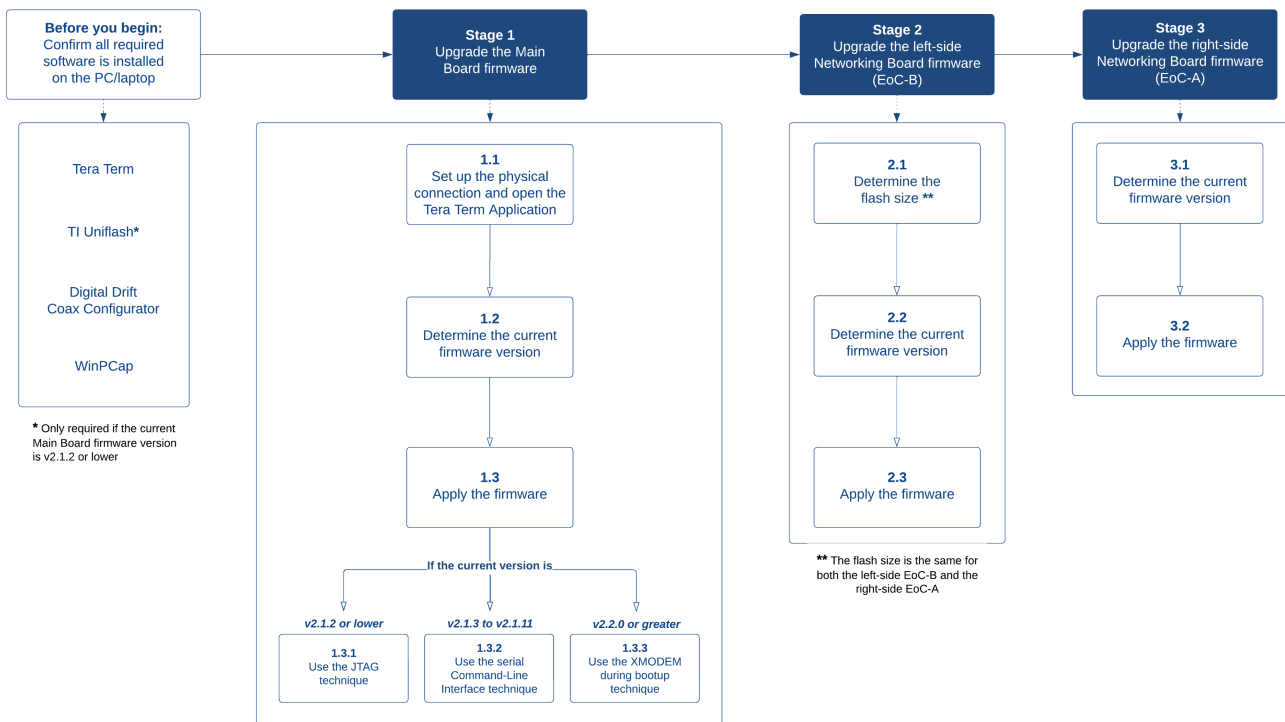

Scope

This guide applies to anyone responsible for upgrading the firmware for the LAE.

This guide does not include instructions for updating the firmware via Bluetooth, using the **Digital Drift Connect** mobile application.

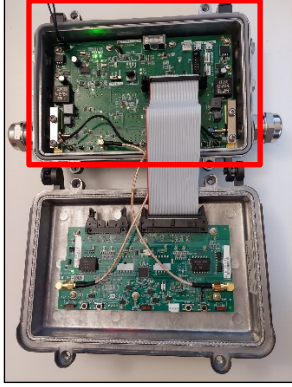

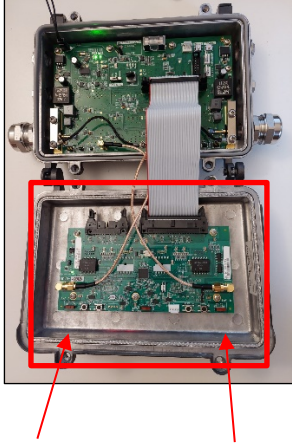

Flowchart: How to upgrade the firmware of the LAE

The flowchart illustrates the steps required to upgrade the firmware for all three processors in a LAE.

Before you Begin: Parts Description

The following parts are required to upgrade the firmware.

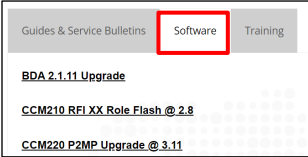

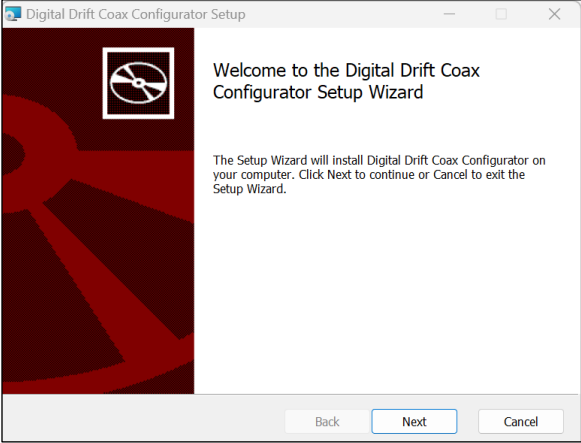

Part Description		Required in
<p>1. LAE</p>		<p>Sections 1, 2 and 3 of this guide</p>
<p>2. LAE Main Board, located in the base.</p> <p>This circuit board is responsible for RF splitting/combining VHF signal amplification, narrowband VHF diagnostics and all power related functions.</p> <p>Note: The image is an example only and may vary, depending on the hardware variant.</p>		<p>Section 1 of this guide</p>
<p>3. LAE Networking Board, also known as the Ethernet board, located in the lid.</p> <p>This circuit board is responsible for the Ethernet over Coax (EoC) signal processing, and the Layer 2 Ethernet switching.</p> <p>Notes:</p> <ul style="list-style-type: none"> ▪ The LAE Networking Board is made up of the 'left-side' (EoC-B) and 'right-side' (EoC-A). ▪ The image is an example only and may vary, depending on the hardware variant. 	 <p style="text-align: center;">Left-side (EoC-B) Right-side (EoC-A)</p>	<p>Sections 2 and 3 of this guide</p>
<p>4. A USB to TTL serial cable. Either:</p> <ul style="list-style-type: none"> ▪ RFI DD-CONSOLE-USB ▪ FTDI TTL-232R-RPI 		<p>Section 1 of this guide</p>

Part Description		Required in
<p>5. TI JTAG programmer</p> <p>Note: Only required if the Main Board firmware is currently V2.1.2 or lower</p>		<p>Section 1 of this guide</p>
<p>6. Ethernet cable</p>	 	<p>Sections 2 and 3 of this guide</p>

Before you Begin: Software Required

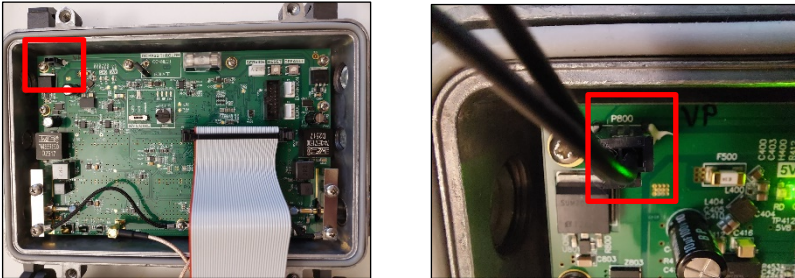

The following software must be installed on the PC/laptop to perform the firmware upgrade.

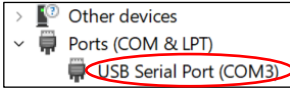

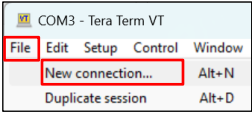

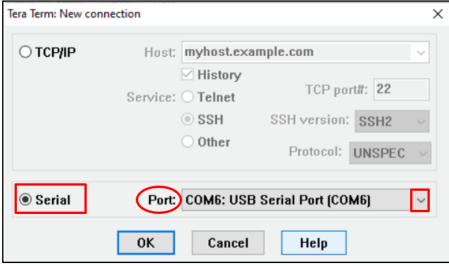

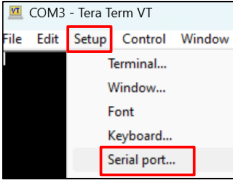

Software Name	Required in	Install Instructions									
<ul style="list-style-type: none"> Tera Term 	<p>Section 1: Upgrade the Main Board Firmware</p>	<p>Install Tera Term. To do this:</p> <ol style="list-style-type: none"> Copy and paste the following link into an internet browser: https://tssh2.osdn.jp/index.html.en Click [Download]. <div data-bbox="783 591 1177 663" style="border: 1px solid black; padding: 5px;"> <p>Tera Term Home Page</p> <p>[Project page] [License] [Download] [Snapshot] [Document] [Users ML]</p> </div> <ol style="list-style-type: none"> Click the latest .exe file from the Download Package List. <div data-bbox="783 734 997 1003" style="border: 1px solid gray; padding: 5px;"> <p>Download Package list</p> <p>Tera Term (38 items) Hide</p> <p>4.106 (2 files) Hide</p> <table border="1"> <thead> <tr> <th>Name</th> </tr> </thead> <tbody> <tr> <td>teraterm-4.106.exe</td> </tr> <tr> <td>teraterm-4.106.zip</td> </tr> </tbody> </table> <p>4.105 (2 files) Show</p> <p>4.104 (2 files) Show</p> </div> <p style="text-align: right; margin-right: 100px;">Select the latest .exe file</p> <ol style="list-style-type: none"> Follow/accept the prompts to install Tera Term. Follow and accept the prompts to install WinPCap.

1. Upgrade the Main Board Firmware

1.1 Set up the physical connection and open the Tera Term Application

Step	Action
1.	Loosen the four screws of the LAE to open the enclosure.
	
2.	Power on the LAE, by either: <ul style="list-style-type: none"> <li data-bbox="229 797 772 831">▪ Applying DC power to the P800 connector; or
	
<ul style="list-style-type: none"> <li data-bbox="229 1140 847 1173">▪ Drawing DC power from the coaxial backbone cable. 	
<p>Note: A green LED light displays on the Main Board when on.</p>	
3.	Connect the USB to TTL serial cable from the LAE SERVICE port to the USB port in the PC/laptop, as shown in the image below.
	

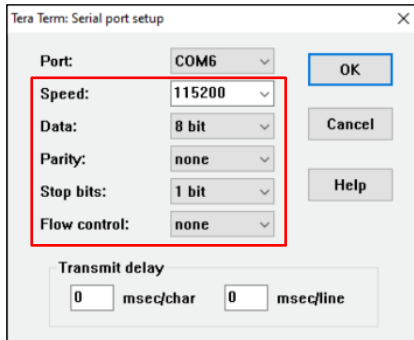

Step	Action
4.	<p>Identify the COM port being used by the USB to TTL serial cable in the PC/laptop. To do this:</p> <ol style="list-style-type: none"> In the search field of your PC/laptop, enter Device Manager and press Enter.  <p>Result: The Device Manager box displays.</p> <ol style="list-style-type: none"> Click > Ports (COM & LPT) Take note of the COM port that displays for the USB Serial Port entry, as this information is required for a later step. <p>Example:</p> 
5.	<p>Open Tera Term in the PC/laptop and from the top menu bar, select File and select New connection.</p> <p>Note: See section Before you Begin: Software Required for instructions on how to install Tera Term.</p>  <p>Result: The Tera Term New connection dialog box displays.</p>
6.	<p>Select Serial and select the correct serial COM port from the Port field drop-down box, identified in step 4 above.</p> 
7.	<p>Click OK.</p> <p>Result: The Tera Term New connection dialog box closes.</p>
8.	<p>From the top menu bar, select Setup and select Serial port.</p>  <p>Result: The Tera Term: Serial port setup and connection dialog box displays.</p>

Step	Action
------	--------

9. Enter the following values in the corresponding fields:

- **Speed:** 115200
- **Data:** 8 bit
- **Parity:** none
- **Stop bits:** 1 bit
- **Flow control:** none

10. Click **OK**.

Note: **New setting** may display instead of OK. In this case, click **New setting**.

Result: The **Tera Term: Serial port setup and connection** dialog box closes.

11. From the menu bar, select **Setup** and select **Terminal**.

Result: The **Tera Term: Terminal setup** dialog box displays.

12. In the **New-line** section, select the following settings:

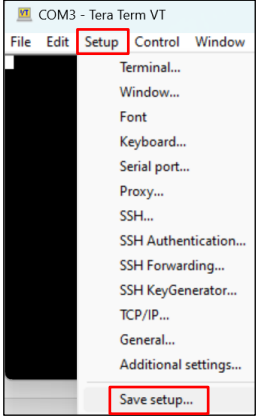

- In the **Receive** field, select **AUTO** from the drop down.
- In the **Transmit** field, select **CR** from the drop down.

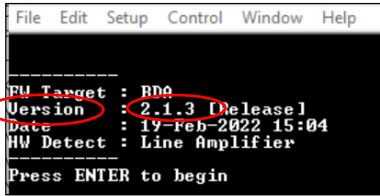

13. Click **OK**.

Result: The **Tera Term: Terminal setup** dialog box closes.

Step	Action
14.	Save the selected Tera Term configuration. To do this:
	a. From the top menu bar, select Setup and select Save Setup .
	 <p>The screenshot shows the 'COM3 - Tera Term VT' window with the 'Setup' menu open. The 'Setup' menu item is highlighted with a red box. The 'Save setup...' option at the bottom of the menu is also highlighted with a red box.</p>
	Result: The Tera Term: Save setup dialog box displays.
	b. Click Save to over-write the default setup.
	Result: The Tera Term Save setup dialog box closes.

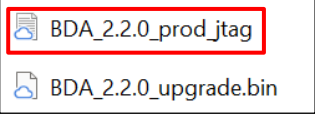

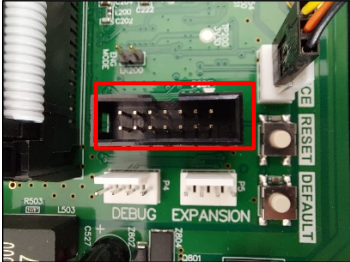

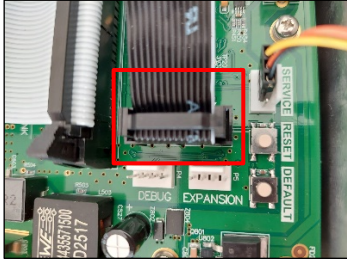

1.2 Determine the current firmware version

Step	Action
1.	<p>Press the RESET button on the LAE's Main Board.</p>  <p>Result: The Tera Term bootup banner displays, stating the current firmware version for the Main Board.</p> <p>Example:</p> 

1.3 Apply the upgrade

Step	Action								
1.	<p>Proceed as follows:</p> <table border="1"> <thead> <tr> <th>If the current firmware version is</th> <th>Then go to</th> </tr> </thead> <tbody> <tr> <td>v2.1.2 or lower</td> <td>Section 1.3.1: Apply an upgrade using the JTAG technique.</td> </tr> <tr> <td>v2.1.3 to v2.1.11</td> <td>Section 1.3.2: Apply an upgrade using the serial Command-Line Interface (CLI) technique.</td> </tr> <tr> <td>v2.2.0 or greater</td> <td>Section 1.3.3: Apply an upgrade using the XMODEM during bootup technique.</td> </tr> </tbody> </table>	If the current firmware version is	Then go to	v2.1.2 or lower	Section 1.3.1: Apply an upgrade using the JTAG technique.	v2.1.3 to v2.1.11	Section 1.3.2: Apply an upgrade using the serial Command-Line Interface (CLI) technique.	v2.2.0 or greater	Section 1.3.3: Apply an upgrade using the XMODEM during bootup technique.
If the current firmware version is	Then go to								
v2.1.2 or lower	Section 1.3.1: Apply an upgrade using the JTAG technique.								
v2.1.3 to v2.1.11	Section 1.3.2: Apply an upgrade using the serial Command-Line Interface (CLI) technique.								
v2.2.0 or greater	Section 1.3.3: Apply an upgrade using the XMODEM during bootup technique.								

1.3.1 How to apply an upgrade to the Main Board using the JTAG technique

Step	Action
1.	<p>Download the latest Main Board production flash image. To do this:</p> <ol style="list-style-type: none"> Copy and paste the following link into an internet browser: https://products.rfi.com.au/en-au/digital-drift-industrial Scroll down to locate and click on, the Software tab. <div data-bbox="284 517 592 611" style="border: 1px solid black; padding: 5px; margin: 5px 0;">  <p>BDA 2.1.11 Upgrade</p> </div> Select the latest LAE upgrade file. <div data-bbox="284 674 596 808" style="border: 1px solid black; padding: 5px; margin: 5px 0;">  <p>QP2 2.2.0 Upgrade</p> <p>BDA 2.2.0 Upgrade</p> </div> Follow the prompts to download and save the upgrade file. Note: The file will be named: BDA_<version>_prod_jtag.txt Example: BDA_2.2.0_prod_jtag.txt <div data-bbox="284 965 600 1077" style="border: 1px solid black; padding: 5px; margin: 5px 0;">  </div>
2.	<p>Open TI UniFlash on the PC/laptop. Note: See section <u>Before you Begin: Software Required</u> for instructions on how to install.</p>
3.	<p>Configure TI UniFlash. To do this:</p> <ol style="list-style-type: none"> Connect the TI JTAG programmer's USB port to the PC/laptop. Connect the TI JTAG programmer's 14-way connector to the black rectangular boxed connector in the top right area of the Main Board. <div data-bbox="269 1417 1003 1677" style="display: flex; justify-content: space-around; margin: 5px 0;">   </div> Ensure the Main Board is on. Start TI Uniflash on the PC/laptop. From the Detected Devices section, click Detect. Note: Start may display instead of Detect. In this case, click Start. <div data-bbox="284 1895 1209 2033" style="border: 1px solid black; padding: 5px; margin: 5px 0;">  </div>

Step	Action
------	--------

4. Update the default settings. To do this:

a. Click the **Settings & Utilities** menu option.

b. Click the following:

- **Allow Read/Write access to BSL memory**
- **Erase main, information and protected information memory.**

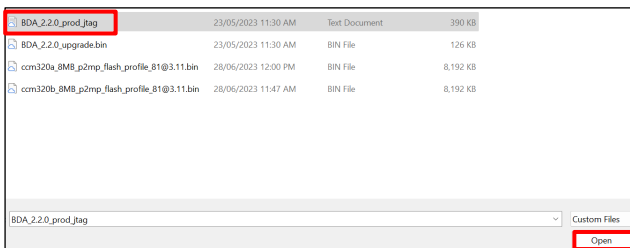

c. Click the **Program** menu option to return to the main programming screen.

d. Click **Browse**

e. Navigate to and select, the upgrade file (BDA_<version>_prod_jtag.txt) downloaded in step 1 and click **Open**.

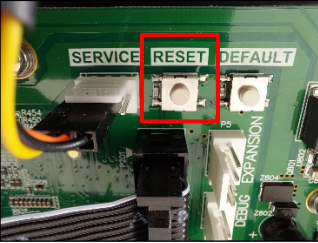

f. Click **Load Image**.

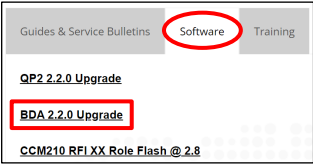

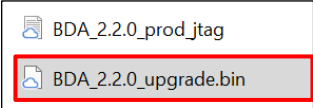

Note: If a dialog box pops up with a warning about the version of firmware in the JTAG programmer, select the option to **upgrade the firmware** in the JTAG programmer to avoid this dialog box from popping up each time a JTAG file is programmed.

Step	Action
5.	<p>Verify the upgrade was successfully programmed. To do this:</p> <ol style="list-style-type: none"> <li data-bbox="229 331 1005 367">Wait for the firmware to be completely and successfully uploaded. <div data-bbox="284 383 730 472" style="border: 1px solid black; padding: 5px;"> <p>☐ Console</p> <p>[5/24/2023, 12:01:09 PM] [INFO] MSP430: There were 120602 bytes written.</p> <p>[5/24/2023, 12:01:09 PM] [SUCCESS] Program Load completed successfully.</p> </div> <ol style="list-style-type: none"> <li data-bbox="229 495 1300 530">Remove the JTAG programmer from the device's 14-way black rectangular boxed connector. <li data-bbox="229 544 813 580">Press the RESET button on the LAE's Main Board. <div data-bbox="284 593 603 835" style="text-align: center;">  </div> <p>Result: In the Tera Term session, the upgraded firmware version displays in the bootup banner.</p>
6.	Disconnect the USB to TTL serial cable and JTAG programmer from the LAE .
7.	Go to <u>section 2</u> : to upgrade the networking board.

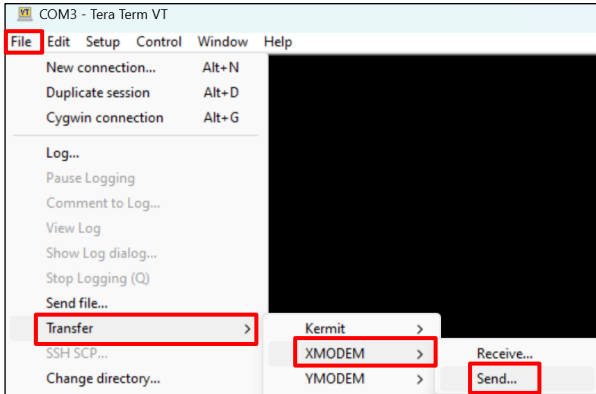

1.3.2 How to apply an upgrade the Main Board using the serial Command-Line Interface (CLI)

Step	Action
1.	<p>Download the latest Main Board upgrade file. To do this:</p> <ol style="list-style-type: none"> Copy and paste the following link into an internet browser: https://products.rfi.com.au/en-au/digital-drift-industrial Scroll down to locate and click on, the Software tab. <div data-bbox="282 526 590 618" style="border: 1px solid black; padding: 5px; margin: 10px 0;">  <p>BDA 2.1.11 Upgrade</p> </div> Select the latest LAE upgrade file. <div data-bbox="282 689 596 853" style="border: 1px solid black; padding: 5px; margin: 10px 0;">  </div> Follow the prompts to download and save the upgrade file. Note: The file will be named: BDA_<version>_upgrade.bin Example: BDA_2.2.0_upgrade.bin <div data-bbox="282 1019 596 1126" style="border: 1px solid black; padding: 5px; margin: 10px 0;">  </div>
2.	<p>Press Enter, type the command fw upgrade partition erase and press Enter.</p> <div data-bbox="233 1207 716 1397" style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre>FW Target : BDA Version : 2.1.3 [Release] Date : 19-Feb-2022 15:04 HW Detect : Line Amplifier Press ENTER to begin LINEAMP> fw upgrade partition erase Erased in 58ms</pre> </div> <p>Note: This command erases the temporary flash storage area used to hold firmware upgrades.</p>
3.	<p>Type the command fw upgrade file transfer and press Enter.</p> <div data-bbox="233 1538 716 1783" style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre>FW Target : BDA Version : 2.1.3 [Release] Date : 19-Feb-2022 15:04 HW Detect : Line Amplifier Press ENTER to begin LINEAMP> fw upgrade partition erase Erased in 58ms LINEAMP> fw upgrade file transfer</pre> </div>

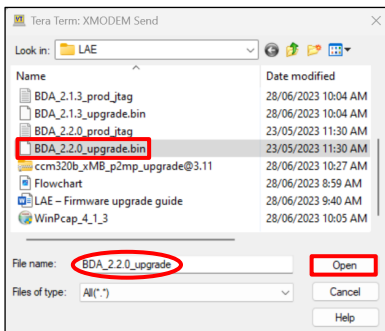

Step	Action
------	--------

4.
 - a. Click **File**.
 - b. Select **Transfer** from the drop-down menu.
 - c. Select **XMODEM** from the drop-down menu.
 - d. Select **Send...**

- e. Select the upgrade file downloaded/saved in step 1 and click **Open**.

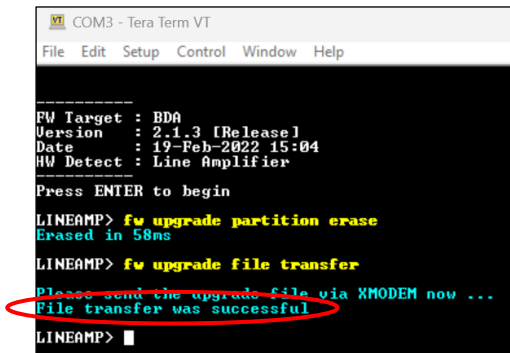

Result: A green download bar displays, while the file transfers.

- f. Wait for the file to be transferred to the LAE.

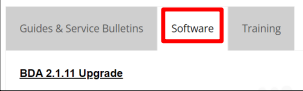

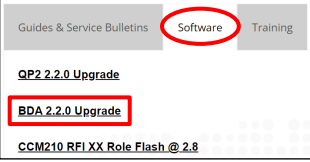

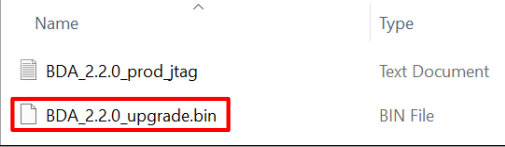

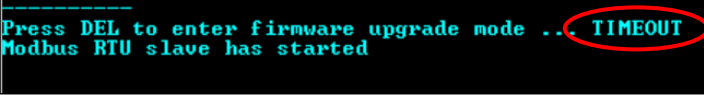

Note: At the conclusion of the file transfer, the message **File transfer was successful** displays. If an error has been encountered, go back to step 2.

Step	Action
5.	Type the command fw upgrade apply and press Enter .
	<pre>FW Target : BDA Version : 2.1.3 [Release] Date : 19-Feb-2022 15:04 HW Detect : Line Amplifier Press ENTER to begin LINEAMP> fw upgrade partition erase Erased in 58ms LINEAMP> fw upgrade file transfer Please send the upgrade file via XMODEM now ... File transfer was successful LINEAMP> fw upgrade apply</pre>
	<p>Important Do not turn off the LAE or the Tera Term App until the upgrade is complete</p>
	<p>Result: When the upgrade is complete, the Main Board restarts and the bootup banner displays the upgraded firmware version.</p>
	<p>Example: New version 2.2.0 displays in bootup banner in the screenshot below.</p>
	<pre>LINEAMP> fw upgrade apply Valid upgrade file detected. HW target : BDA Run modes : User FW version : 2.2.0 ! WARNING : Do not power off until the upgrade is complete ----- FW Target : BDA Version : 2.2.0 [Release] Date : 28-Apr-2023 04:33 HW Detect : Line Amplifier</pre>
6.	Disconnect the USB to TTL serial cable from the LAE .
7.	Go to <u>section 2: to upgrade the networking board</u> .

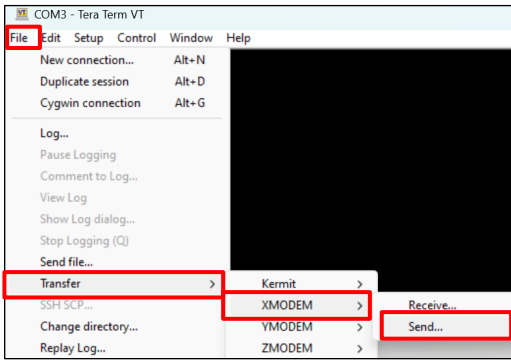

1.3.3 How to apply an upgrade to the Main Board using the XMODEM during bootup technique

Step	Action
1.	<p>Download the latest Main Board upgrade file. To do this:</p> <ol style="list-style-type: none"> Copy and paste the following link into an internet browser: https://products.rfi.com.au/en-au/digital-drift-industrial Scroll down to locate and click on, the Software tab.
	
	<p>c. Select the latest LAE upgrade file.</p>
	
	<p>d. Follow the prompts to download and save the upgrade file.</p> <p>Note: The file will be named: BDA_<version>_upgrade.bin</p> <p>Example: BDA_2.2.0_upgrade.bin</p>
	
2.	<p>Press and release the RESET button on the Main Board.</p>
	
	<p>Result: The boot banner prints.</p>
3.	<p>Press the DEL key within 3 seconds of the prompt appearing to enter firmware upgrade mode.</p>
	<p>Note: If a TIMEOUT message displays in Tera Term:</p>
	
	<ol style="list-style-type: none"> Press the RESET button on the Main Board again. Press the DEL key within 3 seconds of the prompt appearing.

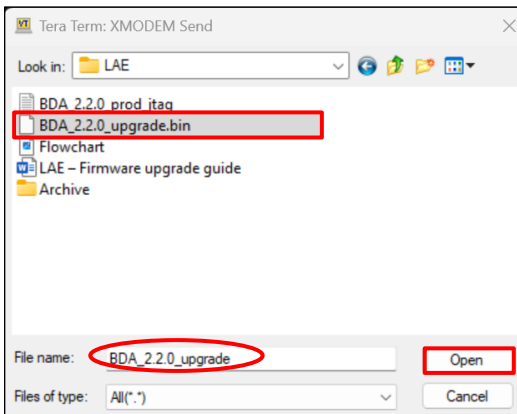

Step	Action
------	--------

4.
 - a. In Tera Term, perform the following:
 - Click **File**.
 - Select **Transfer** from the drop-down menu.
 - Select **XMODEM** from the drop-down menu.
 - Select **Send...**

- b. Select the upgrade file downloaded/saved in step 1 and click **Open**.

Example:

Result: A green download bar displays, while the upgrade file transfers.

5. Wait for the file to be transferred to the LAE.

Note: At the conclusion of the file transfer, the message **File transfer was successful** displays. If an error has been encountered, go back to step 2.

Result: If the file transfer was successful, the new firmware applies immediately, the Main Board restarts and the bootup banner displays the upgraded firmware version.

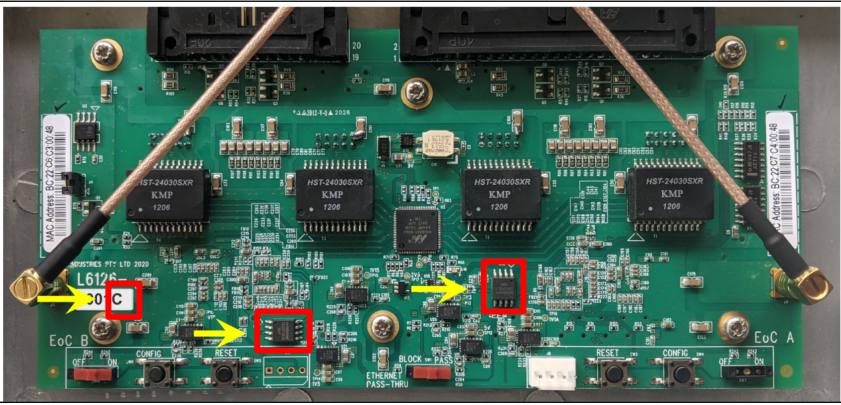

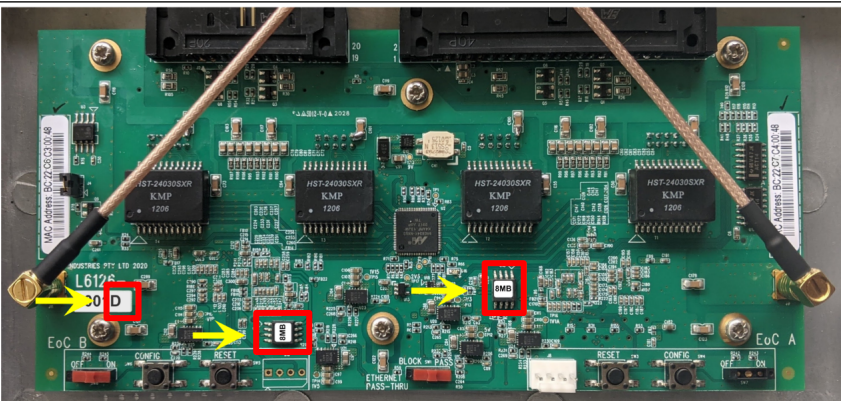

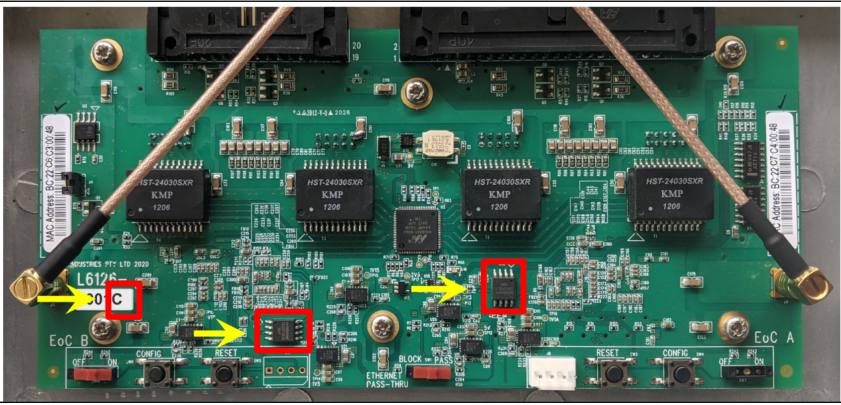

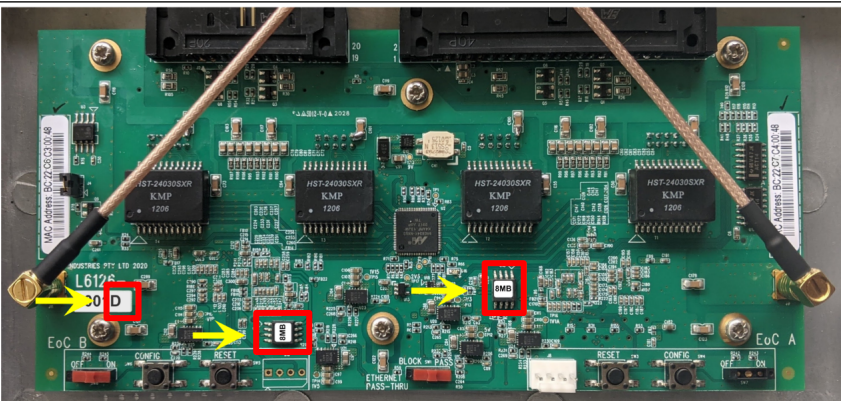

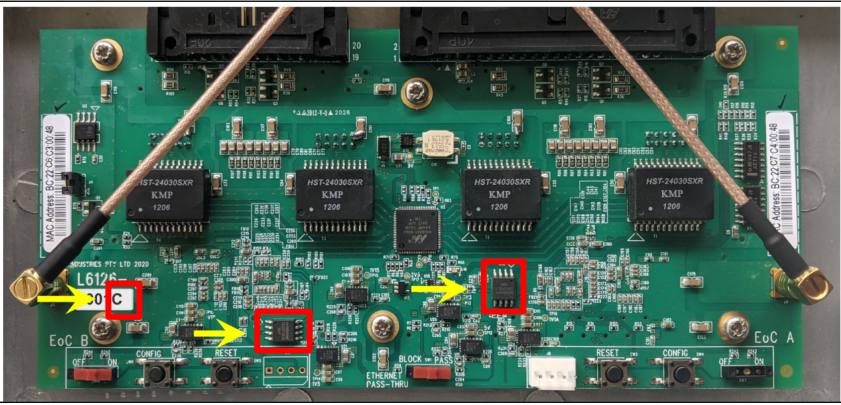

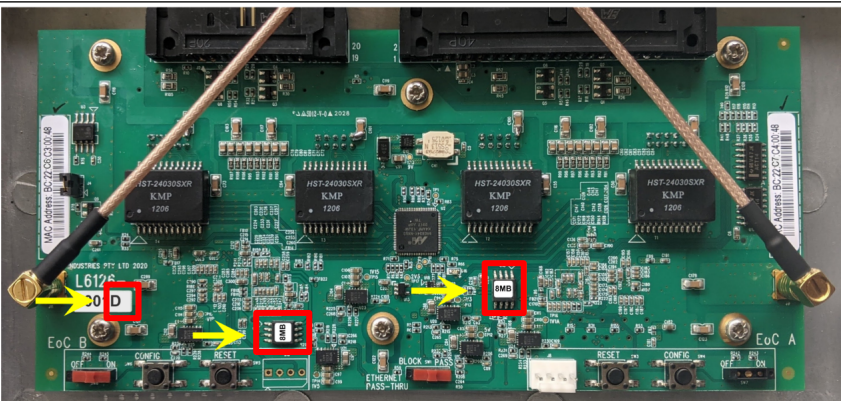

Important Do not turn off the LAE or the Tera Term App until the upgrade is complete

6. Disconnect the **USB to TTL serial cable** from the **LAE**.

7. Go to section 2: to upgrade the networking board.

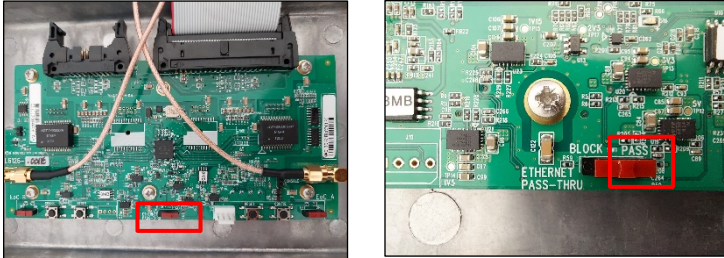

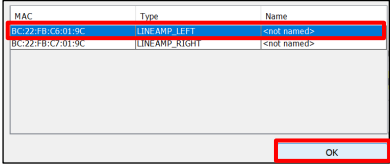

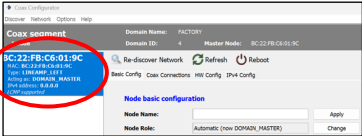

2. Upgrade the 'Left-Side' Networking Board Firmware (EoC-B)

2.1 Determine the flash size

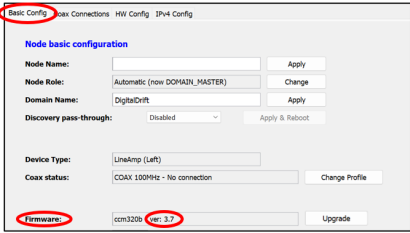

Step	Action						
1.	<p>Locate the networking board, in the lid of the LAE and visually check the following:</p> <p>Note: Knowing whether the hardware is 4MB or 8MB is required in this section and section 3.</p> <table border="1" data-bbox="231 510 1433 1556"> <thead> <tr> <th data-bbox="231 510 1161 560">If the hardware version is</th> <th data-bbox="1161 510 1433 560">Then the current</th> </tr> </thead> <tbody> <tr> <td data-bbox="231 560 1161 1052"> <ul style="list-style-type: none"> ▪ Labelled as C; and ▪ The flash chips are unlabelled  </td> <td data-bbox="1161 560 1433 1052">Hardware is 4MB</td> </tr> <tr> <td data-bbox="231 1052 1161 1556"> <ul style="list-style-type: none"> ▪ Labelled as D or E; and ▪ The flash chips are labelled as 8MB  </td> <td data-bbox="1161 1052 1433 1556">Hardware is 8MB</td> </tr> </tbody> </table>	If the hardware version is	Then the current	<ul style="list-style-type: none"> ▪ Labelled as C; and ▪ The flash chips are unlabelled 	Hardware is 4MB	<ul style="list-style-type: none"> ▪ Labelled as D or E; and ▪ The flash chips are labelled as 8MB 	Hardware is 8MB
If the hardware version is	Then the current						
<ul style="list-style-type: none"> ▪ Labelled as C; and ▪ The flash chips are unlabelled 	Hardware is 4MB						
<ul style="list-style-type: none"> ▪ Labelled as D or E; and ▪ The flash chips are labelled as 8MB 	Hardware is 8MB						
2.	Close the LAE.						

2.2 Determine the current firmware version

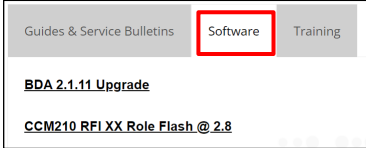

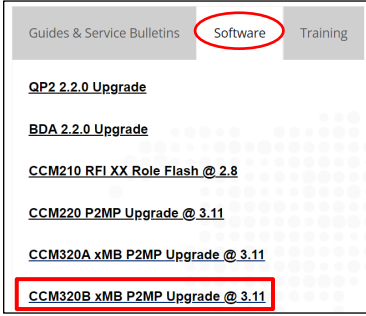

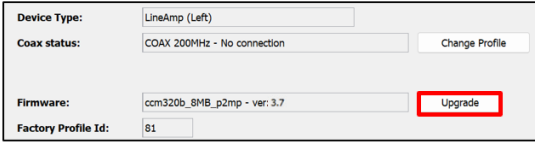

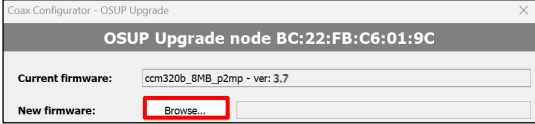

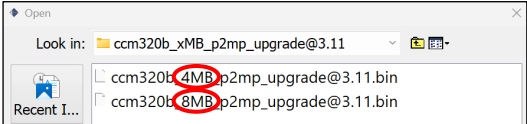

Note: WinPCap must be installed on your PC/laptop to perform these steps. See section [Before you Begin: Software Required](#) for instructions on how to install.

Step	Action
1.	<p>Connect an Ethernet cable from the LAE's left-side RJ45 port to the PC/laptop.</p>  <p>Note: This guide assumes the ETHERNET PASS-THRU switch on the networking board is in the PASS position.</p> <p>Example:</p> 
2.	<p>Open the Digital Drift Coax Configurator application on the PC/laptop.</p> <p>Notes:</p> <ul style="list-style-type: none"> See section Before you Begin: Software Required for instructions on how to install Digital Drift Coax Configurator. WinPCap is required to run Digital Drift Coax Configurator. See section Before you Begin: Software Required for instructions on how to install. <p>Result: A dialog box displays, requesting which coax segment to connect to.</p>
3.	<p>Select the device with a MAC address starting with BC:22:FB:C6:XX:XX with type LINEAMP_LEFT and click OK.</p> <p>Note: This is the left-side EoC processor.</p>  <p>Result: The Digital Drift Coax Configurator displays the unit information on the left hand side of the screen.</p> 

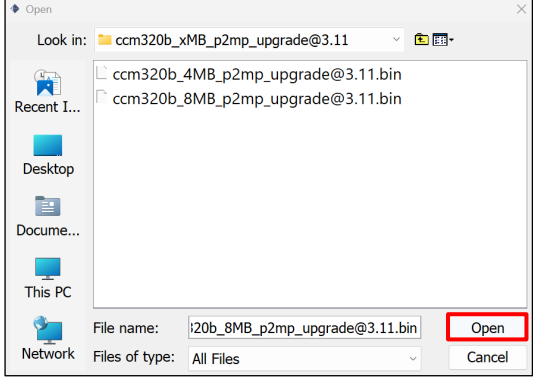

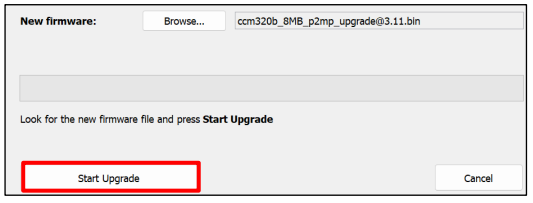

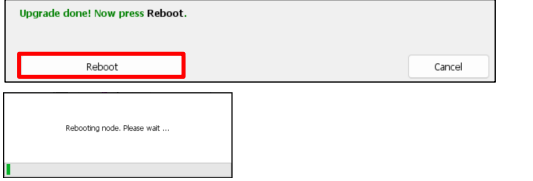

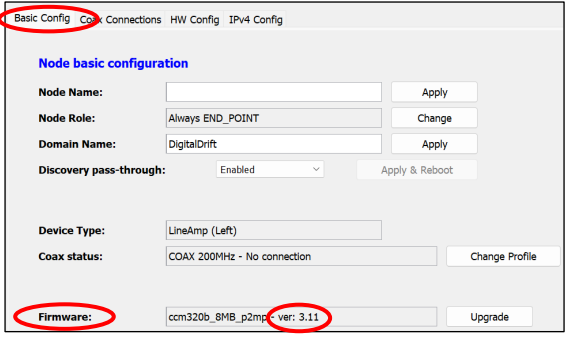

Step	Action
4.	<p>Navigate to the Basic Config tab (if not already there) and note the current Firmware version that displays in the Firmware field.</p>  <p>Note: In the example above, the firmware version is 3.7.</p>

2.3 Apply the Upgrade

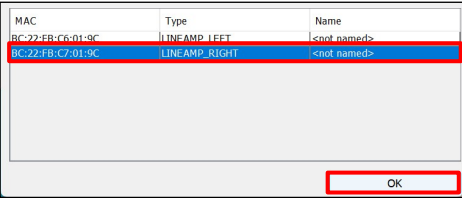

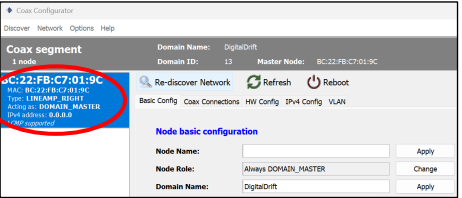

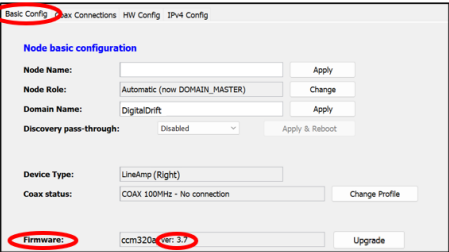

Step	Action
1.	<p>Download the latest upgrade file. To do this:</p> <ol style="list-style-type: none"> Copy and paste the following link into an internet browser: https://products.rfi.com.au/en-au/digital-drift-industrial Scroll down to locate, and click on the Software tab. <div data-bbox="280 533 647 680" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;">  </div> Select the latest upgrade files for the CCM320B hardware platform. <div data-bbox="280 752 647 1066" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;">  </div> Follow the prompts to download and save the file. Unzip the downloaded archive, which extracts the 4MB and 8MB firmware upgrade files.
2.	<p>Click Upgrade in Coax Configurator.</p> <div data-bbox="233 1249 770 1391" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;">  </div> <p>Result: The Coax Configurator – OSUP Upgrade dialog box displays.</p>
3.	<p>From the New firmware field, click Browse.</p> <div data-bbox="233 1525 770 1648" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;">  </div>
4.	<p>Navigate to the relevant upgrade file extracted in step 1 e. and select the upgrade file that matches the LAE EOC-B processor’s flash size (i.e. 4MB or 8MB).</p> <p>Note: The file names are:</p> <ul style="list-style-type: none"> CCM320b_4MB_p2mp_upgrade@<version>.bin CCM320b_8MB_p2mp_upgrade@<version>.bin <div data-bbox="233 1877 762 2000" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;">  </div>

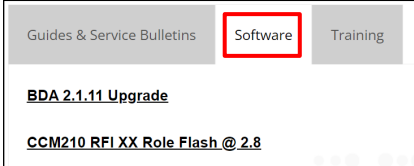

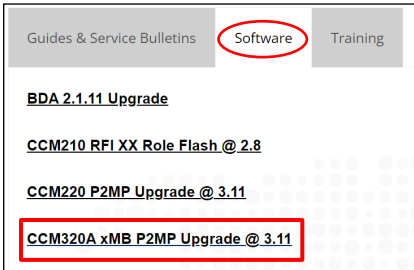

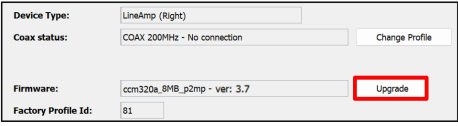

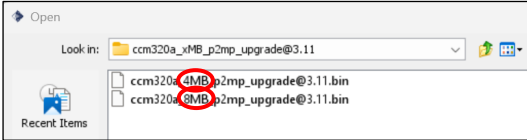

Step	Action
5.	<p>Click Open.</p> 
6.	<p>Click Start Upgrade.</p>  <p>Result: If a compatible upgrade file was selected, the upgrade will commence.</p>
7.	<p>Wait for the percentage bar to reach 100% and an Upgrade done! message to display.</p> 
8.	<p>Click Reboot and wait for the Rebooting node. Please wait... dialog box to close.</p>  <p>Result: The new firmware version displays under the Basic Config tab, in the Firmware field.</p> <p>Example:</p> 
9.	<p>Close Digital Drift Coax Configurator and disconnect the Ethernet cable.</p>

3. Upgrade the 'Right-Side' Networking Board Firmware (EoC-A)

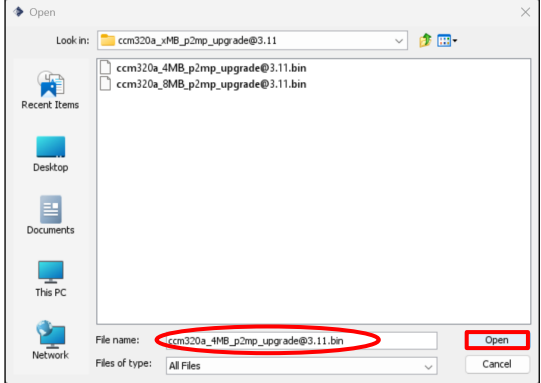

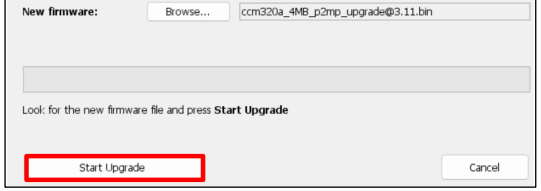

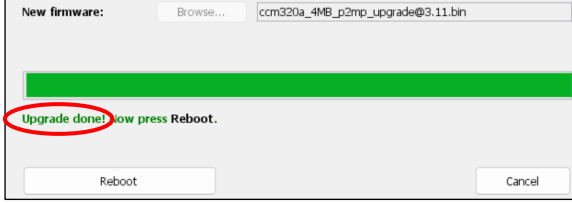

3.1 Determine the current firmware version

Step	Action
1.	<p>Connect the Ethernet cable from the LAE's right-side RJ45 port to the PC/laptop.</p>  <p>Note: The flash size determined in section 2.1 is the same for both the left-side EoC-B and right-side EoC-A.</p>
2.	<p>Open the Digital Drift Coax Configurator application on the PC/laptop.</p> <p>Result: A dialog box displays, requesting which coax segment to connect to.</p>
3.	<p>Select the device with a MAC address starting BC:22:FB:C7:XX:XX with type LINEAMP_RIGHT and click OK.</p> <p>Note: This is the right-side of the EoC processor.</p>  <p>Result: The Digital Drift Coax Configurator displays the unit information on the left hand side of the screen.</p> 
4.	<p>Navigate to the Basic Config tab (if not already there) and note the current Firmware version that displays in the Firmware field.</p>  <p>Note: In the example above, the firmware version is 3.7.</p>

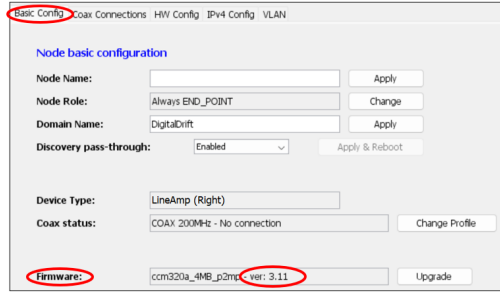

3.2 Apply the Upgrade

Step	Action
1.	<p>Download the latest upgrade file. To do this:</p> <ol style="list-style-type: none"> Copy and paste the following link into an internet browser: https://products.rfi.com.au/en-au/digital-drift-industrial Scroll down to locate, and click on the Software tab. <div data-bbox="280 533 695 698" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;">  </div> Select the latest upgrade files for the CCM320A hardware platform. <div data-bbox="280 766 695 1034" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;">  </div> Follow the prompts to download and save the file. Unzip the downloaded archive, which extracts the 4MB and 8MB firmware upgrade files.
2.	<p>Click Upgrade in Coax Configurator.</p> <div data-bbox="233 1214 692 1339" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;">  </div> <p>Result: The Coax Configurator – OSUP Upgrade dialog box displays.</p>
3.	<p>From the New firmware field, click Browse.</p>
4.	<p>Navigate to the relevant upgrade file extracted step 1 e. and select the upgrade file that matches the LAE EOC-A processor’s flash size (i.e. 4MB or 8MB).</p> <p>Note: The file names are:</p> <ul style="list-style-type: none"> CCM320a_4MB_p2mp_upgrade@<version>.bin CCM320a_8MB_p2mp_upgrade@<version>.bin <div data-bbox="233 1684 762 1823" style="border: 1px solid #ccc; padding: 5px; margin: 10px 0;">  </div>

Step	Action
5.	<p data-bbox="231 291 359 324">Click Open.</p> 
6.	<p data-bbox="231 750 454 784">Click Start Upgrade.</p>  <p data-bbox="231 996 1085 1030">Result: If a compatible upgrade file was selected, the upgrade will commence.</p>
7.	<p data-bbox="231 1064 1173 1097">Wait for the percentage bar to reach 100% and an Upgrade done! message to display.</p> 

Step	Action
8.	<p>Click Reboot and wait for the Rebooting node. Please wait... dialog box to close.</p> <div data-bbox="229 331 727 510">  </div> <p>Result: The new firmware version displays under the Basic Config tab, in the Firmware field.</p> <p>Example:</p> <div data-bbox="229 622 730 913">  </div>
9.	<p>Close Digital Drift Coax Configurator.</p>
10.	<p>Disconnect the Ethernet cable from the LAE.</p> <p>The firmware upgrade is complete.</p>
